

KC9-LW

Ed Brown Products has re-defined the custom handgun market with the EVO series - combining modern design, fixed configurations, and state-of-the-art manufacturing in small custom batches, to produce this series at a 30% lower price point, making it the best value to be found in hand-crafted custom handguns. The EVO-KC9-LW is the newest model in the EVO series.

Starting with our lightweight aluminum frame, the KC9-LW weighs in at only 27 ounces. Ideal for concealed carry, with a Bobtail® housing and concealed carry grip safety, the KC9-LW features Snakeskin treatment for a just the right amount of grip, while being snag-free. The slide has been shortened to 4", and thinned substantially for weight reduction. It also includes our 7-top custom slide cut, with special front and rear serrations for a tactile surface. Optimized for 9mm, it retains 100% 1911 controls and handling characteristics. It features an external extractor, easy-to-change front sight, smaller Tactical Edge rear sight, bull barrel, and a flat wire recoil spring system.
